

# Sea Level Rise, Cities and People

## Kristina Hill

Associate Professor of Landscape architecture & Environmental Planning  
and Urban Design at Berkeley University of California

*"As sea level rises, groundwater levels will also rise near the shore. Cities and infrastructure will need to adapt to protect people's health, the health of nearshore waters, private housing and public infrastructure. What strategies can be used, and which should be avoided? Case studies from the San Francisco Bay Area will be presented as examples, with reference to precedents from The Netherlands"*

### INVITATION TO INSPIRATION WEBINAR TUESDAY 20 OCTOBER 2020 AT 16.00-17.15

It is with great pleasure that we invite to the second webinar in a series which focus on cities and rising sea levels. From different perspectives and based on Danish as well as international research and experiences the webinars will address challenges and solutions. It is free to join.

Registration: No later than 18 October 2020 to Kamilla Møller email: [kahm@ign.ku.dk](mailto:kahm@ign.ku.dk)

Language: English. Platform: Zoom. Link will be sent by email before the webinar.
